ANNOUNCEMENT

Capricorn Project Magnetics-EM Survey

Aurora Minerals Limited is pleased to announce that it has signed a contract with Geotech Airborne Pty Ltd to commence a geophysical survey of the Talga Fault at its large Capricorn Base Metals - Uranium Project in Central Western Australia.

The survey will utilize the VTEM (Versatile Time-Domain Electromagnetic) system to locate conductors and a high sensitivity cesium magnetometer for mapping geological structure and lithology.

Following a recent ground inspection by the Company's geologists, the size of the survey area has been increased by approximately 20% to include additional targets on the northern side of the fault zone.

The survey will cover approximately 150km of the Talga Fault and is expected to cost in excess of \$1 million.

The aim of the survey is to generate drill targets.

Yours faithfully

Robert Taylor
Managing Director

Garry O'Hara
Executive Director
